Harbor air-gapped Install

This setup is tested on ubuntu 22.04 jammy

Requirements

- Docker Engine
- Docker Compose Plugin
- Openssl (pre-installed)
- Ports: 443 4443 80
- Harbor Offline Installer

Setup

Docker

After Downloading the following packages:

- containerd.io__.deb
- docker-ce__.deb
- docker-ce-cli__.deb
- docker-buildx-plugin__.deb
- docker-compose-plugin__.deb The packages need to be installed:

```
sudo dpkg -i $(ls directory/where/deb/are)
```

Harbor

1. Download the Offline installer from the release page
2. Copy it to server over scp
3. Extract the tar:

```
tar xzvf harbor-offline-installer-*.tgz
```

A new directory will appear named harbor

```
cd harbor
```

4. Take a copy of the harbor installation template to update the needed variables

```
cp harbor.yml.tmpl harbor.yml
```

5. Update the harbor.yml file with a text editor and update the following variables:

- hostname (url of harbor)
- https (can be commented out for internal usage or behind proxy)
- harbor_admin_password (default admin password)
- database.password (database password)
- external_url (URL that will be used to access harbor can container port)

6. Run the installer script:

```
sudo ./install.sh --with-trivy
```

7. A sample nginx conf:

```
  location / {
      proxy_set_header X-Forwarded-For $proxy_add_x_forwarded_for;
      proxy_set_header Host $http_host;
      proxy_set_header X-Forwarded-Proto $scheme;
      proxy_redirect off;
      proxy_http_version 1.1;
      proxy_connect_timeout      10m;
      proxy_send_timeout         10m;
      proxy_read_timeout         10m;
      proxy_pass http://harbor-ip;
      client_max_body_size 3000M; # this can be adjusted
}
```

Notes

Some extra configs might be needed to accomidate the specific infra but this is a general idea of the setup
